No-Surgery, No-Scar **EVLT**®

Remember life before bulging, twisted varicose veins?

You can have that freedom again with the EVLT® procedure. Tens of millions of people – up to 40% of women and 25% of men – suffer from this condition. Traditionally, painful surgery was the only treatment option.

Now there's safe, fast, and comfortable EVLT® (EndoVenous Laser Treatment).

"During the EVLT® procedure, I felt hardly any pain at all. After the procedure I dressed myself and went for my regular walk. I had some mild bruising, but felt better almost immediately."

- Jeff D. EVLT proponent

EVLT® Eliminates Varicose Veins at the Source

The twisted bulging that causes discomfort and embarrassment results from faulty valves in the veins. As blood flows through your veins to the heart, stop valves are supposed to prevent the blood from flowing backwards as gravity pulls it down. If the valves don't close properly, blood pools in the vein, forcing the walls to enlarge and bulge out.

EVLT® uses targeted laser energy to seal the vein shut and help you look and feel better fast.

- Treatment in approx. 1 hour
- Can be performed at our office
- Return to normal activity the same day
- No anesthesia or hospitalization
- No scars

"EVLT® is a tremendously safe and effective procedure"

Robert Min, M.D., Radiologist-in-Chief at NewYork-Presbyterian/Weill Cornell Medical Center, Chair of Radiology, and President/CEO of the Weill Cornell Physician Organization.

The EVLT® Procedure

EVLT® is a quick, minimally invasive laser procedure that leaves no scar and can be performed in our office. The treatment usually takes less than one hour.
What to expect:

- Your doctor uses ultrasound to map out your vein.
- Local anesthesia is applied
- A thin laser fiber is inserted through a tiny entry point, usually near the knee
- Laser energy is delivered to seal the faulty vein
- Walking immediately after the procedure is encouraged.
- Normal daily activity can be resumed, just avoid rigorous activities such as gym workouts.
- There may be minor soreness and bruising. Any discomfort can be treated with over-the-counter pain relievers as needed.

Our Team

Our team consists of Vascular Surgeon Dr Dion Davidson, Certified Ultrasonographers, Certified Compression Stocking Fitters, and other friendly and knowledgeable staff.

Frequently Asked Questions

How does EVLT® work?

The laser energy damages the vein walls, shrinking them and closing the faulty vein so that the blood cannot flow through it. This decompresses vein bulging at its source.

Is loss of this vein a problem?

No. After treatment, blood in the faulty veins will be diverted to normal veins in the leg.

How successful is EVLT®?

Published clinical studies show that EVLT® has a 98% initial success rate with excellent long-term results.
